

Python Range Practice

1. What function creates a range in Python?

`range()`

2. Range's 3 arguments are called:

- a. `start`
- b. `stop`
- c. `step`

3. What data type is a range?

`range`

4. Print out range `rng` so that you can see every item it includes.

`print(list(rng))`

5. Create a range from 0 to 50, excluding 50.

`range(50)`

6. Create a range from 0 to 10, excluding 10.

`range(10)`

7. Create a range from 0 to 100, including 100.

`range(101)`

8. Create a range from 0 to 10, excluding 10, with steps of 2.

`range(0, 10, 2)`

9. Create a range from 0 to 50, including 50, with steps of 2.

`range(0, 51, 2)`

10. Create a range from 1 to 10, including 10.

`range(1, 11)`

11. Create a range from 100 to 160, excluding 160, with steps of 10.

`range(100, 160, 10)`

12. Create a range from 5 to 100, including 100, with steps of 5.

`range(5, 101, 5)`

13. Create a range from 1300 to 700, excluding 700, with descending steps of 100.

`range(1300, 700, -100)`

14. Create a range from 200 to 0, including 0, with descending steps of 20.

`range(200, -1, -20)`

15. Create a range with the following values: [0, 1, 2, 3, 4]

`range(5)`

16. Create a range with the following values: [0, 2, 4, 6, 8, 10]

`range(0, 11, 2)`

17. Create a range with the following values: [1, 2, 3, 4, 5]

`range(1, 6)`

18. Create a range with the following values: [0, 2, 4, 6, 8]

`range(0, 9, 2)`

19. Create a range with the following values: [1, 3, 5, 7, 9]

`range(1, 10, 2)`

20. Create a range with the following values: [11, 14, 17, 20, 23]

`range(11, 24, 3)`

21. Create a range with the following values: [5, 4, 3, 2, 1]

`range(5, 0, -1)`

22. Create a range with the following values: [67, 61, 55, 49, 43]

`range(67, 42, -6)`
