

Name: _____ Date: _____ Period: _____

Day 1 Circle Vocabulary

Word	Definition	Picture	Word	Definition	Picture
Area	The amount of <u>square units</u> that cover a <u>2</u> dimensional shape.		Circumference	The distance <u>around</u> a circle. Like the <u>perimeter</u> of a square.	
Semi-Circle	<u>Half</u> of a <u>circle</u>		Pi, π	The ratio of a circle's <u>circumference</u> compared to its <u>diameter</u>	$\pi = \frac{C}{d}$
Radius	A line from the <u>center</u> point of a circle to the edge.		Diameter	A line that goes from one end of the circle to the other and <u>passes through</u> the center point.	

Mystery Circle Ratio

Unit of Measure	Circumference: Distance around the circle	Diameter: Distance across and through the center of the circle	Ratio: $\frac{\text{Circumference}}{\text{Diameter}}$	$\frac{C}{d}$ Divide the circumference by the diameter
Beans				
Pennies				
cm Cubes				
Counters				

What are your observations about the relationship between the circumference and the diameter of a circle?

The circumference is about 3 times the diameter.

Formula for finding circumference: $C = \pi d$ or $C = 2\pi r$

Complete the tables below. Find the **approximate** values using $\pi = 3..$

R	D	C
10	20	60

$$\begin{array}{c} \leftarrow \quad \rightarrow \\ \div 2 \quad \times 3 \end{array}$$

R	D	C
4	8	24

$$\begin{array}{c} \rightarrow \quad \rightarrow \\ \times 2 \quad \times 3 \end{array}$$

R	D	C
6	12	36

$$\begin{array}{c} \leftarrow \quad \leftarrow \\ \div 2 \quad \div 3 \end{array}$$

Calculate the Circumference: Use $\pi = 3.14$

Formula: $C = \pi d$

Substitute: $C = 3.14(14)$

Solve:

$$43.96 \text{ in}$$

Formula: $C = 2\pi r$

Substitute: $C = 2(3.14)(8)$

Solve:

$$50.24 \text{ ft}$$

Formula: $C = 2\pi r$

Substitute: $C = 2(3.14)(6)$

Solve:

$$37.68 \text{ ft}$$

Determine the circumference of each circle. Use 3.14 for π . Round to the nearest tenth.

4.

$$C = 2\pi r$$

$$C = 2(3.14)(8.4)$$

$$C = 52.8 \text{ ft}$$

5.

$$C = \pi d$$

$$C = 3.14(5)$$

$$C = 15.7 \text{ cm}$$

6. The world's largest flower, the Giant Rafflesia, is 91 centimeters in diameter. Determine the circumference of a Giant Rafflesia to the nearest tenth.

R	D	C
45.5	91	273

$$\leftarrow \div 2$$

$$\begin{array}{r} 45.5 \\ 2 \overline{) 91.0} \\ \underline{80} \\ 11 \\ \underline{10} \\ 10 \end{array}$$

$$\begin{array}{r} 91 \\ \times 3 \\ \hline 273 \end{array}$$

$$\pi = 3$$
