

Modeling Equations with Chips and Cups

Equation	Written Description	Chips and Cups Model	Mathematical Procedure
$\frac{C}{2} = 3$	A number divided by two is three		$\frac{1}{2} \cdot \frac{C}{1} = 3 \cdot 2$ $C = 6$
$C - 5 = -2$	* Five less than a number is negative two.		$C - 5 = -2$ $C - 5 + 5 = -2 + 5$ $C = 3$
$4C = -12$	Four times a number is negative twelve		$4C = -12$ $\frac{4C}{4} = \frac{-12}{4}$ $C = -3$
$x + 2 = 7$	Two more than a number is seven		$x + 2 = 7$ $x + 2 - 2 = 7 - 2$ $x = 5$

Modeling Equations with Chips and Cups - Classwork

Equation	Written Description	Chips and Cups Model	Mathematical Procedure
$\frac{C}{3} = 2$	A number divided by 3 is 2.		$\frac{C}{3} = 2$ $C = 6$
$C - 3 = 8$	* Three less than a number is eight.		$C - 3 = 8$ $C - 3 + 3 = 8 + 3$ $C = 11$
$3x = -9$	3 times a number is -9		$\frac{3x}{3} = \frac{-9}{3}$ $x = -3$
$x + 1 = 6$	a number plus 1 is 6		$x + 1 = 6$ $x + 1 - 1 = 6 - 1$ $x = 5$
