

4-5 Investigation (while Loops)

1. **Pizza Toppings:** Write a loop that prompts the user to enter a series of pizza toppings until they enter a '**quit**' value. As they enter each topping, print a message saying you'll add that topping to their pizza.
2. **Movie Tickets:** A movie theater charges different ticket prices depending on a person's age. If a person is under the age of 3, the ticket is free; if they are between 3 and 12, the ticket is \$10; and if they are over age 12, the ticket is \$15. Write a loop in which you ask the users their age, and then tell them the cost of their movie ticket.
3. **Three Exits:** Write different versions of either Exercise 1 or Exercise 2 that do each of the following at least once:
 - Use a conditional test in the **while** statement to stop the loop.
 - Use an active variable to control how long the loop runs.
 - Use a **break** statement to exit the loop when the user enters a '**quit**' value.
4. **Infinity:** Write a loop that never ends, and run it. (To end the loop, press **CTRL-C**.)
